

MaxiFlow

Quick Change Water Filters

- Commercial, residential, food service and potable water applications including drinking water systems, coolers, coffee, ice makers
- Fibron Filter Media – Premium media for superior and effective filtration and chlorine taste odour reduction.
- No pre flushing required
- Sanitary design for hygienic filter handling
- Manufactured in USA; dependable quality and performance validation
- Housing and cartridge integrated: easy to use and changeout
- High flow rates and capacity. Range of sizes and media to suit application

**Hi capacity
Hi flow
Hi performance**

Fibron Media Benefits

Fibron filter media is a molded block manufactured by proprietary processes where powdered carbon is attached to a cellulose free FDA compliant synthetic fibre matrix. The Fibron product provides superior performance to traditional extruded carbon block filters and is ideal for the wide range of problem water environments in Australia.

PRODUCT FEATURE	FIBRON FILTERS	COMPETITIVE EXTRUDED CARBON /GAC FILTERS
GRAM LIFE/DIRT HOLDING	Fibron matrix has superior dirt holding capability in the range of water conditions = longer filter life and filter change cycle	Tight carbon blocks can 'plug' prematurely or need prefiltration
PRESSURE DROP	Fibron 'open' matrix provides lower pressure drops	Tight carbon blocks = High pressure drops
CHLORINE TASTE/ODOUR REDUCTION	Fibron media has excellent chlorine reduction capacity - suits all applications	Good chlorine reduction capacity
FIRST FLUSH FINES	No fines released in filtered water stream – keeps downstream equipment cleaner	GAC and sub standard blocks release carbon fines – messy
WEIGHT	Light media weight – lowers shipping cost and easy handling	Heavy blocks = higher freight costs and heavy handling

Fibron media is the right choice for Australian water conditions. The media is available in a range of porosities and can be modified with media additives for additional performance claims to suit all requirements.
