

## Pure Clean H2O Water Filters Total Flow Water Filter System

The PCH TF1000 Total Flow water filter system is the perfect water filtration system for your home or office. No separate tap is required as the Total Flow system is connected to your existing coldwater tap. The TF1000 has high capacity media providing long life and extra fine filtration. The system is also easy to install, use and changeout. Filtered water can now be used for drinking, beverage mixing, washing, rinsing and all your cooking needs at your kitchen sink. The TF1000 kit is complete with all installation fittings and s/steel flexible hoses so nothing extra is needed!

The system reduces sediment, particles, chlorine, organic taste & odours and removes parasitic cysts. A unique timestrip™ filter change reminder label is also supplied which provides a simple reminder when the filter cartridge is due for changeout.

Note: The TF1000 is designed to be installed under the kitchen sink where an existing isolating valve ( e.g. cistern mini stop ) and separate cold water mixer s/steel hose is used.

### Model TF1000

### Features & Benefits

- Filters all water to existing cold water tap
- Reduces sediment, dirt , rust, chlorine, taste and odour
- Removes parasitic cysts
- All plumbing fittings and hoses supplied
- WaterMark system - Australian Standard certified
- Filter manufactured in U.S.A
- 12 months manufacturers warranty

### Application

- Kitchen – drinking, cooking, rinsing
- Commercial – food preparation
- Office – replace bottled water
- Schools – drinking water for staff and students
- Potable water only

### Specifications and operating conditions

- Micron rating – 0.5 micron nominal
- Flow rate – < 10 lpm recommended
- Chlorine reduction – 98.5%
- Cyst reduction – 99.99%
- **Part Number :** System – TF1000  
Cartridge – TFC 100
- Capacity – Replace cartridge annually for optimum performance
- Water Pressure range – 100 - 862 kPa (Use pressure limiting valve if pressure is > 862 kPa)
- Temperature range – 2 – 38 degrees C
